RE: Revegetation Plan

Sunshine Mining Company

Burgin Mine ACT/049/009 Utah County, Utah

Dear Mr. Uphoff:

I am sending you a suggested revegetation seed mix for the Burgin minesite. As I indicated during our phone coversation I am concerned about the number of species in the submitted mix from the standpoints of competition and mechanical seeding problems. I am also concerned that some of the native species found on the site were not included on the seed list.

This list is not meant to be a hard and fast plan, but to give you an idea of the plants that the Division feels would be successful on the Burgin site. Seed that is unavailable or prohibitively expensive may be substituted for. In order to stabilize bare soils and prevent erosion you may want to plant at least a few grass species this fall, and later interseed other species, if time is not available to do a full-scale reclamation project. Also, you may want to plant shrub seedlings in the spring after grasses and forbs are well established.

I hope that you will be able to meet us when we tour the site on November 13, 1981. If you are interested in getting together before then, or have any additional questions I can answer, please call me.

Sincerely,

SUSAN C. LINNER

RECLAMATION BIOLOGIST
